Xccela™ flash memory sets a new record for NOR flash speeds to meet the demand for instant-on performance and fast system responsiveness in automotive, industrial, consumer and networking applications.

With Xccela flash, system designers no longer have to choose between the performance of parallel NOR and the small footprint of serial NOR. Our Xccela flash uses a new interface with as few as 11 active signals. It delivers 5X performance while reducing pin count by 4X, energy consumption by 3X and package size by 2X compared to the page mode parallel NOR solution. In addition to enabling one of the fastest possible direct code execution and shadowing, Xccela flash paves the way for simpler system designs, lower system costs and lower energy consumption.

**Key Features and Benefits**

- **JEDEC xSPI standard compliant**
- **Densities:** 256Mb to 2Gb
- **Performance:** Up to 200 MHz in double data rate (DDR) with data strobe, 400 MB/s read throughput or 166 MHz in single transfer rate, 166 MB/s read throughput, 73.3ns initial access time and 2.5ns subsequent access time, 2 MB/s (256 bytes page buffer) program throughput
- **Interface:** Standard single SPI interface and octal I/O interface, along with DDR mode, to enable a high degree of flexibility, performance and backward compatibility; only 11 active signals for DDR operation
- **Single Supply Voltage:** Low-voltage range (1.7–2.0V) or full voltage range (2.7–3.6V) support
- **Energy Consumption:** Low 28 pJ/bit energy consumption
- **Package Options:** Industry-standard, Pb-free TBGA24
- **Temperature Range:** Full industrial (–40°C to 85°C) and automotive AEC-Q 100 Grade 2/Grade 1 (–40°C to 105°C/125°C) temperature support to address a variety of applications
- **Security:** Hardware and software block protection; one-time programmable region

**Why Buy Micron Xccela Flash Memory?**

1. **Expertise and Quality**
   Products defined and developed by a team of engineers, system architects and ecosystem partners to give you access to leading, proven, high-reliability solutions that can handle the most stringent application requirements.

2. **Competitive Solutions**
   Get instant power-on with best-in-class 400 MB/s read throughput; improve firmware updates with extremely fast 2 MB/s program throughput; and increase application security* with features like advanced block protection.

3. **Unwavering Commitment to the Industrial and Automotive Markets**
   Micron is expanding its Manassas, U.S. fabrication site to support the rapidly growing need for high-quality, high-reliability memory solutions. This site manufactures our long-lifecycle products to ensure supply continuity for the industrial and automotive markets. Delivering a leading-edge, state-of-the-art auto- and industrial-qualified memory portfolio with the associated lifecycle support places Micron in a class by itself and further underscores our continued commitment to these markets.
Micron Xccela™ Flash Memory

Performance That Matters
Serial peripheral interface (SPI) NOR flash is used in a wide array of applications for boot code, program code and data storage. Xccela flash memory maintains backward compatibility with SPI NOR flash, making migration between these products relatively easy. Xccela flash also offers dramatically better performance while consuming less energy per bit compared to traditional SPI and quad SPI NOR flash, with random access times as fast as 83ns and sequential byte reads as fast as 2.5ns. Sustained read throughputs of 400 MB/s enable an entire 1Gb Xccela flash device to be read in a mere 0.3 seconds. With Xccela flash memory’s direct execute-in-place operation and low-pin-count interface, valuable board space can be saved and the need for code shadowing can be eliminated.

Xccela Flash Applications
With lower-density memory subsystem interfaces trending toward x4/x8 SPI interfaces and performance growing exponentially, OEMs are looking for simple, low-energy memory solutions to meet their needs.

• Automotive: Based on advanced NOR process technology and robust design methodologies, Xccela flash memory is highly reliable, supports the automotive temperature range, and is AEC-Q100 qualified. With automotive systems integrating electronic technology at lightening-quick speeds, consumer expectations for instant-on has carried over to automotive applications such as advanced driver assistance systems, infotainment platforms and instrument clusters. Xccela flash is ideal for instant-on applications.

• Industrial Multi-Market: As low-end microcontrollers (MCUs) continue to shrink in die size, there is a need to augment the small amount of internal memory with a low pin count, high-performance memory subsystem. With only 11 active signal pins, Xccela flash significantly reduces the bond pads of an MCU design. Other industrial human machine interface applications that require instant-on and fast execution like industrial PCs, factory automation and medical diagnostic equipment can also benefit from Xccela flash.

• Core Networking: Enterprise communication demands fast, robust and secure networking equipment. Xccela flash breaks the NOR flash speed limit and addresses the requirements of next-generation networking infrastructures.

• Consumer: The combination of extreme performance and low pin count makes Xccela flash ideal for consumer applications that are space-constrained and require instant-on, such as digital still cameras, DSLRs and home automation.
